

A box plot comparing the distribution of the number of children per household across five New York City boroughs: Bronx, Brooklyn, Manhattan, Queens, and Staten Island. The y-axis represents the number of children, ranging from 0 to 10. The plot shows that Manhattan has the highest median number of children (approximately 5.5) and the most outliers, with many households having 7 or more children. Brooklyn follows with a median around 4.5. Queens and Staten Island have lower medians (around 3.5 and 3.0, respectively), and the Bronx has the lowest median (around 3.0). The distribution in the Bronx is skewed to the right, with a long tail of outliers extending up to 10 children.
